CARES

The Cardiac Arrest Registry to Enhance Survival (CARES) program helps communities measure resuscitation performance and identify how to improve cardiac arrest survival rates. By joining CARES, communities gain more than just access to information that will help them improve performance and save lives. They also contribute to one of the largest EMS registries in the world, and one of the few that also includes patient outcome information from hospitals. Those features enable CARES data to be used to conduct vital research that furthers our knowledge of cardiac arrest treatment and save countless lives.
